1. PseudoCode With Python

```
1 # Input number of elements
2 N = int(input("Masukkan jumlah bilangan: "))
3
4 # Initialize maximum value to 0
5 max_val = 0
6
7 # Loop through N times to get the numbers
8 for i in range(1, N + 1):
9     bilangan = int(input(f"Masukkan bilangan ke-{i}: "))
10
11     # Check if the current number is greater than max_val
12     if bilangan > max_val:
13         max_val = bilangan
14
15 # Display the maximum number
16 print(f"Bilangan terbesar adalah: {max_val}")
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL RUNS

```
PS C:\Users\Khusnul Khotimah\Downloads\praktikum 3 pemrograman > "C:/Users/Khusnul Khotimah/AppData/Local/Programs/Python/Python313/python.exe" "C:/Users/Khusnul Khotimah/Downloads/praktikum 3 pemrograman/LATIHAN 2.py"
Masukkan jumlah bilangan: 1
Masukkan bilangan ke-1: 2
Bilangan terbesar adalah: 2
PS C:\Users\Khusnul Khotimah\Downloads\praktikum 3 pemrograman >
```
